DETAILED ACTION

Allowable Subject Matter

1. Claims 85-133 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. As per claim 85 and dependent claims 86-117, the examiner found no reference in the prior art that disclosed or made obvious a system comprising: a data processor configured to receive as inputs outputs representative of a number of pulses produced by a respective radiation detector during a time interval and configured to process the inputs to determine characteristics of objects within an item and including all limitations as recited in independent claim 85.
4. As per claim 118 and dependent claims 119-127, the examiner found no reference in the prior art that disclosed or made obvious a system comprising a plurality of channels, each channel comprising means for making a plurality of counts of pulses produced by one of a plurality of means for producing, each of the counts representing a number of pulses with an amplitude in a predetermined range and means for analyzing the counts to form a representation of an item and including all limitations as recited in independent claim 118.
5. As per claim 128 and dependent claims 129-133, the examiner found no reference in the prior art that disclosed or made obvious a method comprising the steps of counting pulse with levels representative of at least three energy levels produced by a plurality of detectors; combining the counts of the pulses into a representation of an item and analyzing the representation of the item to determine properties of objects within the item based in part on the relative number of counts of each energy level and including all limitations as recited in independent claim 128.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: U.S. Patents 5,974,111 to Krug et al. and 5,044,002 to Stein disclose systems and method of inspection utilizing pulse height analysis.
